An axle group is a group of consecutive axles where the space, (s), between axles is more than 40 inches and not more than 96 inches.

An additional 5,000 pounds may be added to the primary drive axle group only, regardless of color code. This applies to permitted vehicles only.

The maximum allowed axle weights apply to all permitted vehicles in excess of legal weight limits.

The smallest distance, (d), between adjacent axle groups shall be used to determine the maximum allowed axle group weights for those axle groups.

This is demonstrated in the following example:

For this example, the maximum white color code weight = 283,000 pounds.

**NOTE:** All loads greater than 200,000 pounds require a Chapter 8 Special Permit.
